

Setup

conda

- <https://docs.anaconda.com/free/miniconda>
- MacOS: \$ brew install miniconda

```
type conda
```

Bash should show an explanation that begins with “conda is a function”.

clone

- <https://github.com/jhanley634/dojo-2024-03-12>
- ```
git clone https://github.com/jhanley634/dojo-2024-03-12.git
```

## virtual environment

```
cd dojo-2024-03-12
conda env update
conda activate dojo-2024-03-12
which python && python --version
```

## run

```
make test
```
